GNA-G Mission (1/2)

- The primary mission of the Global Network Advancement Group (GNA-G) is to **support global research and education** using the technology, infrastructures and investments of its participants.
- The GNA-G exists to **bring together** researchers, National Research and Education Networks (NRENs), Global eXchange Point (GXP) operators, regionals, and other R&E Network providers in developing a **common global infrastructure for support of these needs**.

GNA-G Mission (2/2)

- The GNA-G exists to further the understanding about how to **effectively use** the rich networking infrastructure the NREN community has created:
 - The GNA-G will suggest best practices, efficient ways for interaction between NREN's, be a means to encourage NREN's to try new techniques and technologies.
 - In doing these things the GNA-G will help to make the investment the NRENs have made in building networks have a greater value to the community those investments are meant to serve, the Education and Scientific/Research communities.

2. Current state and outlook

3. New ideas & proposals for Working Groups

4. COVID-19 Readiness
